### **Are there benefits to Neuro-Omega3 Fatty Acids?**

- Dry Eye.
- Excellent anti-inflammatory.
- Allergies and Asthma.
- Multiple Sclerosis.
- Cancer (Breast Cancer, Colon Cancer and Prostate Cancer).
- Tumour Growth Inhibition.
- Crohn's and Inflammatory Bowel Disease.
- Diet, Weight Control, and Obesity.
- Adult and Child Attention Deficit Disorder (ADD/ADHD).
- Cholesterol Reduction.
- Arteriosclerotic Diseases.
- Memory loss / Alzheimer's.

Omega 6 fats increased the spread of prostate tumour cells into bone marrow, while omega3 fatty acids were seen to block this invasion.

Help reduce the risk of a myocardial infarction (heart attack) or cerebral stroke.

Reduce blood lipids, blood pressure and blood clotting.

Essential for both neurological and early visual development of the baby.

The fetus uses omega-3s for its nervous system development.

Omega-3s are also used after birth to make breast milk.

Has a positive effect on visual and cognitive development of the baby.

May reduce the risk of allergies in infants.

Decreases the mother's risk for depression.

To prevent pre-term labor and delivery, lower the risk of pre-eclampsia and may increase birth weight.

Bipolar Disorder/Depression.

Neuro-Omega3 is:

A Molecularly distilled and certified pharmaceutical-grade fish oil

Produced under the meticulous EU standards governing production of prescription medication

*Wisdom* for Healthy Living

Ultra-Tested and has undergone rigorous testing in approximately 100 clinical trials involving more than 4000 patients

Sourced from the world's leading supplier of ultra-pure, marine-derived omega 3 EPA/DHA fatty acid concentrates

The highest-quality fresh raw material sourced

Manufactured through a molecular distillation process that removes virtually all impurities.

Purified from free fatty acids, coloured components, protein residues.

Purified from all pesticides, PCBs, dioxins, brominated flame retardants and other organic pollutants present in the oil.

Handled with care, with minimum exposure to oxygen (omega 3 fatty acids become unstable when exposed to oxygen, high temperatures, light, as well as alkaline or acidic reaction media).

A GMP Certified product (Good Manufacturing Practice (GMP) A GMP is a system for ensuring that products are consistently produced and controlled according to quality standards. It is designed to minimize the risks involved in any pharmaceutical production that cannot be eliminated through testing the final product
